

CNC MILLING MACHINE XL

MODEL NO – SL-PT-10003, MAKE – LABTEK, ORIGIN – INDIA

General Description:

The CNC machines can exist in virtually any of the forms of manual machinery. The most advanced CNC milling-machines, the multi-axis machine, add two more axes in addition to the three normal axes (XYZ). The fifth axis (B axis) controls the tilt of the tool itself. When all of these axes are used in conjunction with each other, extremely complicated geometries, even organic geometries such as a human head can be made with relative ease with these machines. But the skill to program such geometries is beyond that of most operators. Therefore, 5-axis milling machines are practically always programmed with CAM
